PROFESSIONAL EXPERIENCE

Software Developer Intern, Tap Invest 

08/2025 – Present | Bangalore,India

- Shipped 39 features and 11 screens in 8 months across BondScanner and Ultra apps . Converted 65% of app widgets to model-driven rendering, enabling UI updates from the backend without app releases.
- Delivered Multiple Bank Addition flow end-to-end in 3 days — contributed to 10% of total AUM from its very first month.
- Shipped a KYC nudge in 2 hours on an urgent weekend deploy; achieved a 22% conversion rate improving the KYC funnel.
- Built the Portfolio Reports feature across mobile, web, and backend — delivering P&L, Capital Gains, Holdings, and Transaction reports directly to users' mailboxes.
- Built an MCP server for Bond Scanner extending the product with a Model Context Protocol integration.
- Developed core investment modules: Plural Payment Gateway, Holdings screen, Monthly Income flow, and Multiple Bank Addition flow for portfolio tracking and payouts.
- Built essential user-facing screens: Welcome-Login, SignUp (multiple auth channels), Search, Order History, and Order Summary.
- Integrated Digio services for secure document handling and verification within the app.
- Contributed to Gold and Silver SIP flows in Ultra app.
- Introduced Coach Marks and HLS video player for Welcome Flow 2.0 in BondScanner.

SKILLS

Programming Languages: Java , Flutter, C , C++ , JavaScript	Frontend: React.js, Tailwind CSS, Dart, Html	Backend: Node.js, Express.js,Next.js,REST APIs
Tools & Platforms: Git, GitHub, Postman, Vite	Problem Solving: DSA in Java(200+ problems on LeetCode)	Database: MongoDB,MySQL

PROJECTS

Get Me A Chai - Creator Funding Platform, Next.js | MongoDB | Razorpay | Next-Auth

- Developed a secure crowdfunding platform where fans can support creators through one-time payments, implementing Razorpay integration with order validation and webhook processing
- Built user authentication with Next-Auth supporting Google, GitHub, Facebook, and Apple OAuth, with MongoDB session storage
- Designed responsive UI with form validation, toast notifications, and protected routes using Next.js middleware

VoltRoute-EV Charging Station Locator, Node.js | Express | Tailwind | MongoDB | APIs

- Architected a full-stack application using Node.js and Express.js that helps electric vehicle owners locate nearby charging stations through Map API integration and geolocation services
- Implemented secure user authentication system with Firebase and MongoDB Atlas for efficient storage of user profiles, and charging station metadata
- Developed RESTful API endpoints for charging station data retrieval with filtering capabilities with real-time availability status

TypoFix – Intelligent Spell Correction Tool, React.js | Tailwind CSS | C++ | Algorithm

- Developed a spell correction application with React.js frontend and C++ backend implementing Levenshtein Distance and Wagner-Fischer algorithms for efficient string comparison
- Engineered typing performance measurement system calculating WPM and accuracy metrics with $O(n*m)$ time complexity using dynamic programming techniques
- Integrated C++ algorithmic backend with React.js frontend through optimized API communication layer for real-time text processing and error detection

EDUCATION

B.Tech – Computer Science (CGPA: 9.1), BMS Institute of Technology and Management, Bangalore	2022 – 2026
12th Grade (87%), St Gregorios Sr. Sec School (CBSE),Udaipur	2022
10th Grade (88%), St Gregorios Sr. Sec School (CBSE),Udaipur	2020
